

CYBER SECURITY SERVICES

*Cyber attacks are costing
firms millions. You could
lose everything.*

*Is your clients'
money at risk?*

KAUFMAN | ROSSIN

*That's why
we're here.*

Most investment firms don't know the potential financial loss they face if a cyber-event occurs. At a recent New York conference, an industry expert told attendees that the average cost of a cyber attack had grown to \$22 million. And that doesn't even count the damage to their reputations. When you put your clients' data at risk, you put your relationships in jeopardy.

It's just bad business to leave sensitive information, critical assets, and clients' money at risk.

Yet many firms don't even know what their cyber liabilities are, or how vulnerable their data is to a threat. Regulators are raising the bar, yet firms delay compliance or attempt to save money using inexperienced resources to meet the requirements.

The number and complexity of computer viruses and cyber attacks continue to rise.

No company is immune. A security breach can result in irreversible damage to your finances and reputation. In today's environment, you must understand the cyber security threats your business may encounter and the solutions available to protect your data and information systems.

Cyber attacks against the financial services industry increased in 2014. And it's not just the largest institutions that need to invest in prevention and protection measures. Broker dealers, hedge funds, and registered investment advisors hold tremendously valuable data about wealthy investors. That data has become a prime target.

We currently work with more than 1,000 clients in the investments arena. Our team of nationally certified information security consultants follows globally accepted standards to meet your most challenging information security needs. Kaufman Rossin's knowledge and expertise in the financial services industry provides you with professional experience, industry insight, and sensitivity to your business needs.
