

CYBER SECURITY

A single data breach could bankrupt your business.

You may be starting to think data breaches are inevitable. Some business owners are opting for cyber insurance. Others are counting on their internal IT teams to keep their systems safe.

What are the chances one of your employees would open a dangerous email?

But most don't truly understand the potential impact of a cyber incident. Many don't know how vulnerable their data is. And those who think insurance is the answer are often shocked to learn the limits of such coverage, or how hard it is to qualify.

Ransomware, malware, social engineering, phishing attacks – alarming new terms for new threats crop up every day. No matter how smart and loyal your people are, statistics show they are likely to put your organization at risk.

More than 30+ full-time risk advisors, plus 300+ professionals with industry expertise

Decades of experience adding value for businesses

Clients from innovative startups to established public companies, in dozens of industries

Hackers take advantage of organizations with poor network architecture, limited backup procedures, inadequate training, and unwitting employees. We help you fight back.

- 1 We turn hacking into a business tool** to pinpoint your weaknesses and identify your threat exposure.
- 2 We help you close as many gaps as possible**, by evaluating your firewall and other perimeter defenses. The more you block a hacker from reaching your data, the better your security posture becomes.
- 3 We train your employees** to spot risky emails, and we test them, reporting how many take the bait.
- 4 We check on your policies**, procedures and configurations to help manage your cyber security risk.
- 5 Complete safety isn't possible.** What's your incident response plan – **how will you deal with employees, clients, and the media?**
- 6 We help you recover.** Our incident response team is ready to help investigate, recover and remediate breaches.

Kaufman Rossin's Risk Advisors help you manage data security as a critical business risk, not just an IT issue.
